SECTOR BREAKOUT (%)

Top 10 by Active Weight is a measure of a stock's contribution to the fund's active performance. A stock's active weight is determined by calculating the difference between the stock's % weighting in the fund as compared to stock's % weighting in the benchmark, and, ranking the difference for all stocks in the fund to generate the top 10 holdings.

Active weight differs from the fund's absolute % holding of the stock and, as a result, a stock that is a top 10 holding by portfolio weight may not necessarily be a top 10 holding by active weight.
