This material is intended for use by Investment Advisors, including with their clients.

*Delta-adjusted exposure indicates a fund's overall sensitivity to a financial instrument, aggregating the exposure created by combining long (or short) holdings with option positions.

Risk/Reward Analysis results are calculated based on Class F fund unit's daily data since inception. Due to the fund's limited history, all risk/reward analysis results may not be statistically relevant. **Beta** measures the fund's volatility relative to its benchmark: a rating of "1" implies the fund's movements are identical to the index (typically you pay a manager to achieve beta of less than 1). **Up/Downside Capture** is a measure of an investment manager's performance during only the up or down movements of an index (ideally you want low downside and a fairly high level of upside): the numbers shown here are the fund's up/down capture relative to the benchmark(s). **Maximum drawdown** measures the largest single drop in a class's Net Asset Value Per Unit from peak to trough before establishing a higher peak (the smaller, the better). **Top/Bottom 10 Holdings by Active Weight** is a measure of a stock's contribution to the fund's active performance. A stock's active weight is determined by calculating the difference between the stock's % weighting in the fund as compared to stock's % weighting in the benchmark, and, ranking the difference for all stocks in the fund to generate the top and bottom 10 holdings. Active weight differs from the fund's absolute % holding of the stock and, as a result, a stock that is a top or bottom 10 holding by portfolio weight may not necessarily be a top or bottom 10 holding by active weight.

The compounded rate of return in "Growth of \$10,000 Investment" chart is used only to illustrate the effects of the compound growth rate and is not intended to reflect future values of the investment fund or returns on investment in the investment fund. Commissions, trailing commissions, management fees, performance fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. The indicated rates of return are the historical annual compounded total returns including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.
