**Before you invest in any fund, consider how the fund would work with your other investments and your tolerance for risk.**

**This mutual fund is an alternative mutual fund. It has the ability to invest in asset classes or use investment strategies that are not permitted for conventional mutual funds. The specific strategies that differentiate this Fund from conventional mutual funds include: increased use of derivatives for hedging and non-hedging purposes; increased ability to sell securities short; and the ability to borrow cash to use for investment purposes. While these strategies will be used in accordance with the Fund’s investment objectives and strategies, during certain market conditions they may accelerate the pace at which your investment decreases in value.**

**This mutual fund has obtained exemptive relief to permit it to utilize short selling and/or cash borrowing to provide additional investment exposure pursuant to which the mutual fund may engage in the short selling of securities and/or cash borrowing with a combined limit of 100% of its net asset value. This short selling and cash borrowing limit is greater than the limits permitted under applicable securities legislation for conventional mutual funds as well as alternative mutual funds.**

## How risky is it?

The value of the Fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

## Risk rating

The Manager has rated the volatility of this Fund as **low to medium**.

This rating is based on how much the Fund's returns have changed from year to year. It doesn't tell you how volatile the Fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the Fund's returns, see the "What is a mutual fund and what are the risks of investing in a mutual fund?" section of the Fund's simplified prospectus.

### No guarantees

Like most mutual funds, this Fund doesn't have any guarantees. You may not get back the amount of money you invest.

The hurdle amount per unit on a valuation day is the product of (a) 2% for each calendar year (pro-rated for the number of days in the year); (b) the unit price on the applicable valuation day; and (c) the number of days since the most recently determined high water mark or the beginning of the current calendar year, whichever is most recent.
