

PICTON MAHONEY FORTIFIED ACTIVE EXTENSION ALTERNATIVE FUND

At Picton Mahoney Asset Management, we recognize the increasing importance of Know Your Product (KYP) requirements. To help you with this, we have prepared this KYP document for each of our mutual funds and liquid alternatives. These documents are carefully crafted to include information you might need to satisfy KYP requirements for the portfolios you have entrusted us with. You can expect to find these documents maintained on a quarterly basis.

This document includes:

- [FIRM OVERVIEW](#)
- [UNDERSTAND OUR PROCESS](#)
- [KNOW YOUR PRODUCT \(KYP\)](#)
- [WHAT MAKES US DIFFERENT?](#)
- [USEFUL RESOURCES TO COMPLETE THE KYP JOURNEY](#)

FIRM OVERVIEW

Our Mission	To help investors achieve their financial goals with greater certainty.
Firm Background	<p>In 2004, Picton Mahoney Asset Management (“PMAM”) was founded with the goal of providing thought-leading investment management services to institutional, retail, and high net worth investors in Canada.</p> <p>PMAM has about \$9.9 billion in assets under management in sub-advisory, hedge fund and mutual fund assets as at December 31, 2023, and has been 100% employee-owned since inception.</p>
The Investment Team	<p>The Picton Mahoney Fortified Active Extension Alternative Fund is managed by David Picton and Jeff Bradacs, CFA.</p> <p>David Picton, President and Chief Executive Officer of Picton Mahoney Asset Management, is a founding partner of the firm and lead Portfolio Manager responsible for the Canadian equity market neutral, long short, and long only strategies. Mr. Picton has been a prominent presence in the Canadian investment industry for several decades, including launching Synergy Asset Management in 1997 and working as its lead Canadian momentum portfolio manager and spending eight years as Head of Quantitative Research at RBC Dominion Securities Inc. where he was one of the top ranked analysts in his sector. Mr. Picton holds an Honours Bachelor of Commerce degree from the University of British Columbia. He also received a Leslie Wong Fellowship from the University of British Columbia’s prestigious Portfolio Management Foundation.</p> <p>Jeffrey Bradacs, Co-Head Equity Strategies, Head of Portfolio Management & Trading, is a Portfolio Manager at Picton Mahoney Asset Management specializing in Canadian equities. Prior to joining Picton Mahoney Asset Management, Mr. Bradacs was a Vice President and Senior Portfolio Manager at BMO Global Asset Management where he was the lead Portfolio Manager for Canadian large cap equity portfolios. Prior to that, he spent over a decade at Manulife Asset Management, joining as an Analyst and progressing to Managing Director, Portfolio Manager, with responsibility for Canadian equity portfolios managed with a blend of fundamental and quantitative analysis. Mr. Bradacs earned an Honours Business Administration degree from the Richard Ivey School of Business (University of Western Ontario) and is a CFA charterholder.</p>

THE PROCESS

Our Philosophy and why it works

PMAM's investment philosophy is firmly rooted in the belief that fundamental change is the core driver of share price performance. We also believe that systematic and repeatable processes alongside strong risk management capabilities are the key to successful investing and consistent outperformance. PMAM was born out of these principles, which remain intact and unchanged to this day.

The rationale behind our thinking:

- Disclosure in many markets is efficient and instantaneous with securities quickly reflecting all known information. Therefore, change at the margin is the key driver of price.
- Our research has found that positive and negative fundamental changes tend to occur in bundles.
- Many investors are reluctant to change their long-standing opinion on a security even though fundamental information is changing before their eyes.
- Small changes today have the potential to compound significantly over time.

We believe that proper portfolio construction is a key differentiator in the Canadian investment industry. Our goal is to construct diversified portfolios that maximize our investor's exposure to the fundamental change characteristics we value - while at the same time maintaining our pre-determined risk targets.

Our Process

We employ a unique combination of quantitative models and fundamental research - united in purpose, but distinct and independent in operation, both disciplines consider similar opportunities and risk factors. When these separate engines agree with one another on an investment candidate, it provides a powerful fundamental change signal, which bolsters manager conviction during the security selection process.

Quantitative Input

Our proprietary quantitative platform is built upon a multi-level backtesting framework that measures and ranks companies on a series of manufactured "Super Factors," which have shown to be effective at differentiating between strong and weak performing stocks. These Super Factors include Momentum, Quality, and Value, among others. At the base level, we utilize "descriptors" which we view as the main building blocks of the process.

As an example, "Earnings Revisions" and "Revenue Revisions" are the descriptors that roll into the "Core Factor" group of "Analyst Revisions." Similarly, "Price Momentum" and "Residual Momentum" are combined into the "Technical/Price" Core Factor group. These two Core Factors are then combined into "Momentum" Super Factor group, as shown below. The same process is applied to the Quality and Value super factor groups. Using our internally generated weights for each of these factors, alpha scores are generated for each stock in the respective universe – with the model being recalibrated monthly.

Super Factor	Core Factor	Descriptors
Momentum	Technical/Price	Price Momentum
		Revenue Revisions
	Analyst Revisions	Earnings Revisions
		Residual Momentum

The alpha scores along with risk models from MSCI Barra are fed into the optimizer to generate model quantitative portfolios. To create these model portfolios, constraints are put in place in the optimizer to make sure exposures are within the range as defined by the mandate. Model recommendations are provided to Portfolio Manager(s) and recorded in PM Perform (a proprietary software platform) where performance is tracked daily.

Fundamental Input

Our team of fundamental sector analysts search for change candidates using fundamental research strategies – proprietary research, panoramic financial analysis, meeting/assessing company management, weekly team meetings and global sector-specific conferences. The objective of this process is to not only identify companies changing for the better/worse but to also assess the sustainability of this change and to identify positive/negative change candidates before they are picked up by traditional quantitative strategies. The resultant output is a list of thesis statements for the top 20, high-conviction names for each analyst's sector. These names are provided to portfolio managers and tracked in PM Perform.

Analysts are expected to identify:

- The key characteristics of the company and the competitive landscape
 - Positive/Negative changes occurring or about to occur
 - Key catalysts that will drive the stock and factors the market may be missing
 - The risks – What could go wrong?
 - Valuable inputs provided by our team of credit analysts
 - Valuation metrics and target price
-

Portfolio Construction

When constructing portfolios, the Portfolio Managers, along with their respective Portfolio Analysts begin assessing those securities which rank as attractive long and short candidates by both our Quantitative and Fundamental processes. Rankings are turned into alphas and fed into our proprietary optimization and control software, which tracks correlations of securities and factors across time. Optimization and risk control software are used as a tool to assist Portfolio Managers with the efficient weighting of securities to maximize the potential return of the portfolio without taking on excessive risk, while accounting for:

- Security Concentration
- Industry Concentration
- Sector Concentration
- Flows, Positioning and Liquidity
- Tracking Error

The Portfolio Manager assesses all information and makes the final decision on the selection and weighting of names in the portfolio.

Risk Management

Our clients' portfolios are continuously monitored by our Risk and Quantitative Research Teams along with our Portfolio managers and Compliance Team. This three-tier approach ensures daily adherence to respective investment policy guidelines as well as active risk monitoring.

1. Portfolio Managers:

- Review daily portfolio returns, quantitative/fundamental recommendations and positioning through PM Perform, our proprietary portfolio management tool.

2. Risk Committee:

- Receive reports produced by Risk and Quantitative Teams: Factor/risk exposures, attribution, surplus/deficit of active risk
- Establish and oversee risk mandate: Set thresholds for active risk factors & conduct ongoing liquidity assessment and stress testing against custom metrics
- Communicate findings to Portfolio Managers
- Provide recommendations to Senior Management Committee when necessary

3. Compliance Team:

- Monitor portfolios against Investment Policy Guidelines: Pre- and post-trade warnings, hard rules and monitoring to help prevent breaches

Buy/Sell Discipline

We put a strong focus on names where both independent fundamental and quantitative inputs agree with each other when it comes to buy/sell decisions. Risk management and proprietary portfolio optimization systems act as a tool for position weightings. We always take a position with an investment thesis behind it. When the underlying company exhibits negative relative and/or absolute change and our thesis is no longer valid, we replace the security with a name that has more attractive characteristics. Portfolio managers have the ultimate say on adds/trims and weighting.

Investment Research

The vast majority (~80%-90%) of investment research/ideas are generated in-house. Our Quantitative and Fundamental Teams operate independently, providing recommendations based on their thorough assessments of specific trends and fundamental change characteristics.

Our proprietary in-house modelling platform is constructed using data supplied by several providers. Our investment team also leverage information from various sources regarding change stories and earnings models to determine the assumptions that are embedded in their growth forecasts.

Objective	The investment objective of the Fund is to offer investors consistent long-term capital appreciation with an attractive risk-adjusted rate of return with similar volatility to the traditional equity market.	
Strategy	<p>To achieve the investment objective, the Fund invests in an actively managed long portfolio composed primarily of securities of companies identified as attractive investment candidates by PMAM's investment process. We will buy quality companies in the midst of positive fundamental change with reasonable valuations and short sell securities identified as unattractive investments by the Portfolio Manager's investment process and/or to hedge the market exposure of the Fund's long positions. Sophisticated risk control tools are used to construct the portfolio to minimize risks within it.</p> <p>The Fund will be structured so that it generally possesses 100% net equity market exposure. That is, on average, over an economic cycle, the Manager expects the Fund will possess a net 100% long exposure with market beta of approximately 1.0.</p> <p>On average, over time, the Portfolio Advisor expects that, for every \$100 invested, the Fund's portfolio shall be constructed as follows:</p> <p style="text-align: center;">\$100 Cash → \$130 stock bought long (\$30) stock sold short</p> <p>resulting in a gross market exposure of 160%. The Portfolio Manager may alter the gross market exposure of the Fund depending on the Portfolio Advisor's expectations of the overall equity markets up to 200% of gross market exposure. On a position-by-position basis, margin requirements of the applicable exchange will be adhered to by the Fund.</p> <p>The Fund will invest primarily in Canadian equities but will not be limited in the type of equity securities in which it may invest.</p>	
Inception date	September 27, 2018	
Benchmark	S&P/TSX Composite Index (TR)	
Product AUM	\$82.0 Million

LLC • Registrar: RBC Investor Services Trust, TSX Trust Company Inc. (ETF Units) • Legal Counsel: Osler, Hoskin & Harcourt LLP 	

WHAT MAKES US DIFFERENT?

The Fund

- The fund aims for an average equity beta of ~1.0 – full market exposure over time.
- The fund aims to achieve 160% gross exposure, by investing 130% of assets long while selling 30% assets short, extending the opportunity for alpha while maintaining similar net exposure (100%) to a traditional long-only mutual fund or ETF.
- The ability to short enables the manager to profit from companies that are overpriced and more importantly, seeks to mitigate broad market risk.
- PMAM's portfolio management team has over 15 years of experience developing and managing innovative investment strategies for our clients. PMAM's investment solutions manage risk exposures to help investors maximize their overall returns for the level of risk they are comfortable accepting. Our differentiated investment process combines discipline with stringent risk controls to enhance risk-adjusted returns through all market cycles. Our process has been especially important during more uncertain market environments.
- Our investment results reflect the unique blending of Fundamental and Quantitative research.
